About TarMart Lifescience

"Your One-Stop Biotarget eMart"

Who We Are

TarMart™, a proud extension of GeneMedi, is an all-in-one solution for biological research tools and reagents. Engineered to empower scientists and researchers, we are dedicated to advancing the exploration of therapeutic targets, diagnostic biomarkers, and functional gene studies. Our platform is built on the robust foundation of the GeneMedi Insight Target Database (GM-ITD), delivering a seamless, high-quality experience for drug development, diagnostic innovation, and foundational biological research.

What We Offer

TarMart™ provides a comprehensive suite of cutting-edge research tools, meticulously designed to meet diverse scientific needs:

- ▶ **PromiseORF™ cDNA Viral Vectors** : Precision tools for gene expression studies.
- ▶ **PromiseDown™ Pre-Validated siRNA Oligos** : Reliable solutions for gene silencing.
- ▶ **GMab Antibodies** : High-specificity antibodies for accurate detection.
- ▶ **RealAgen™ Recombinant Proteins** : Consistent, performance-driven proteins.
- ▶ **Specialty Reagents** : Including LipoGene transfection reagents, molecular biosensors & bioprobes, anti-Tag antibodies (e.g., HRP-anti-FLAG tag antibody), secondary antibodies, Ig isotypes, and more.

Every product undergoes rigorous validation to ensure exceptional quality, reliability, and reproducibility, empowering you with the confidence to achieve consistent results.

Our Commitment

At TarMart™, we go beyond supplying tools—we simplify science. By consolidating critical resources into a single, user-friendly platform, we streamline access to essential reagents, enhance experimental precision, and boost research productivity. Our goal is to accelerate your journey from discovery to transformative applications, saving you time and effort.

Why TarMart?

Whether you're pioneering cutting-edge therapies, designing next-generation diagnostics, or unraveling the mysteries of gene functions, TarMart™ is your trusted partner. We provide tailored solutions that drive scientific breakthroughs, equipping you with the tools to push boundaries and shape the future of human health.

Our Vision

We believe that innovation begins with the right resources. TarMart™ is committed to bridging the gap between research and real-world impact, fostering a community of scientists who can turn ideas into solutions. Together, we're advancing human health—one breakthrough at a time.

TarMart™: Your One-Stop Biotarget eMart

PromiseORF™ cDNA Clones viral vectors

Explore the Promise-ORF™ library from GeneMedi, home to the most comprehensive collection of sequence-verified ORF/cDNA expression clones. Sourced from multiple species, such as humans, mice, and rats, our clones are tailored for researchers seeking precision and reliability.

Choose from a range of trusted delivery systems, including lentivirus, AAV, adenovirus, and mammalian expression vectors. With Promise-ORF™ viral-ready expression vectors, you can streamline viral packaging or transfect mammalian cells directly, making gene expression detection both efficient and dependable.

PromiseDown™ siRNA/miRNA/oligo

PromiseDown™ siRNA Oligo provides expertly designed oligonucleotides for unmatched specificity and efficiency, ensuring precise and reliable gene silencing. With a broad selection of targets and flexible customization options, we help you push the boundaries of genetic research.

Whether you're venturing into new areas or validating critical targets, PromiseDown™ is your trusted partner.

RealAgen™ Antigen/Recombinant Proteins

RealAgen™ Recombinant Proteins are essential tools for researchers in the life sciences, providing high-purity, reliable proteins for a variety of experimental needs. These proteins are ideal for applications such as protein interaction studies, enzyme assays, and structural biology.

Each protein is produced under stringent quality control to ensure consistency and functionality, supporting reproducible results across experiments. With options for different species and fusion tags, RealAgen™ proteins offer the flexibility required for diverse research projects.

GoldenSignal™ Tool Antibody Reagent

Anti-FLAG antibody Validation

GeneMedi's Anti-FLAG antibody demonstrates superior performance in immunoblot and FACS analysis

Figure 1. GeneMedi's GMLS-Tag001-Ab-1 anti-FLAG Mouse Monoclonal Antibody (M2 epitope) demonstrates superior performance in western blot and FACS assays.

A. Lane 1 contains cell lysate from untransfected 293T cells; lanes 2-5 contain 100 ng, 30 ng, 10 ng, and 3 ng of cell lysate from 293T cells transfected with a plasmid expressing engineered A protein-Flag. Immunoblot analysis was performed to detect A protein and Flag proteins.

B. Immunoblot analysis was conducted to detect Flag-tagged proteins. Lanes 1, 2, 4 and 6 contain cell lysates from 293T cells transfected with plasmids expressing proteins of different molecular weights. Lanes 3 and 5 contain control samples of 293T cell lysate without plasmid transfection.

C. A549 cells were transfected with a plasmid expressing engineered X protein-Flag. FACS was performed to detect Flag with control IgG, commercial Flag antibody and GMLS-Tag001-Ab-1.
